

SASS - Lab

Problems for exercises and homework for the ["CSS Advanced" course @ SoftUni](#).

Trainings Page

Create a web page using the [following design](#). Add **scss** files in your project and fill your architecture from the previous workshop.

Constraints

- Convert and refactor all **css** files into **scss** files
- In your project directory update your **/settings** folder with the following files:
 - Add **settings-colors.scss** stylesheet
 - Add **settings-breakpoints.scss** stylesheet (Use the [following stylesheet](#) here or create one by yourself)

Hints

- Use the [following vscode](#) extension to compile your **scss** code to **css**
